When I started challenge, i see input and he told me to put id in the input so I enter 1 and he give me data for user so I enter 2 and he give me data for another user so I intercept the request by using burp suite and send it to intruder and then I do brute force and see the response length

then I click on start attack and see one of the request his length is different very much comparing by other and that when the id is 1500
So I saw the response and see the flag.
